Astana, September 1, 2016

“KazTransOil” JSC announces about the completion of the overhaul of Kazakhstani section of “Tuimazy – Omsk - Novosibirsk – II” trunk oil pipeline (TON-2) with full replacement of 185.6 km of the pipeline

The overhaul of TON-2 was conducted to ensure the reliable transportation of crude oil by Kazakhstani section of TON-2 pipeline – transportation of Kazakh crude oil to Pavlodar Petrochemical Plant and transportation of Russian crude oil to China via the territory of the Republic of Kazakhstan.

The commissioning of modernised TON-2 section took place in the North-Kazakhstan oblast after the completion of overhaul conducted on the turnkey terms by local contractor “Akniet-BN” LLP.

The high quality of services on major repair was confirmed by the independent technical inspection. The works were done in full compliance with the construction norms and rules (SNiP) of the Republic of Kazakhstan.

“One more major project on full replacement of the linear part of the Kazakh section of Tuimazy - Omsk - Novosibirsk-2 MP was completed. As a result of the repair works performed, the Kazakh section capacities grew from 7 to 10 million tons of oil per year that helped significantly increase its transit potential,” – said Dimash Dossanov, the General Director (Chair of the Management Board) of “KazTransOil” JSC.

The project cost over KZT 32 billion.

The act of commissioning was signed August 29, 2016

For your reference:

The Agreement between the Governments of the Republic of Kazakhstan and Russian Federation on cooperation in the area of transportation of Russian oil through the territory of Kazakhstan to the Peoples Republic of China was signed in Moscow on December 24, 2013.

TON-2 MP was put into operation in 1959, and crosses the territory of the two countries: Russian Federation and the Republic of Kazakhstan, thus being the international pipeline. The total length of the Kazakh section of TON-2 is 185.6 km.

“Akniet-BN” LLP (contracting organization) carried out during 2014-2016 the construction and installation works at the facilities in the North-Kazakhstan region to replace the entire TON-2 pipeline passing through the territory of the Republic of Kazakhstan, using the pipe of 720 mm in diameter in factory isolation. The sites with scraper launcher-receivers were equipped in the border areas.

As a result, the reliability and environmental safety of the Kazakh section of TON-2 increased.
