Astana, November 18, 2026

"KazTransOil" JSC saved over 616 million tenge through energy saving in 10 months of 2026

Following the results of 10 months of 2026, the consumption of all types of energy in "KazTransOil" JSC decreased by 4,446 tons of standard fuel, or by 4.37%, compared to the same period in 2025.

Specific energy consumption for oil freight turnover decreased by 4.8% in the reporting period. Economic effect from the reduction in specific energy consumption amounted to 616 million 376 thousand tenge.

Company's facilities' natural gas consumption from January to October 2026 decreased by 4,173 thousand cubic meters, or by 7.68%, compared to the same period last year. Diesel fuel consumption decreased by more than 339 tons, or by 12.2%, compared to the reviewed period of 2025, and gasoline consumption decreased by 32 tons, or by 18.8%, compared to 10 months of last year.

It is important to note that reduction in energy consumption was achieved amidst an increase in the company's production figures compared to the 2025 level.

One of the significant projects in the field of energy efficiency improvement in the third quarter of 2026 was the installation of a new modern booster pump unit at the "Atasu" main oil pumping station. Its operation will save approximately 426 thousand kWh of electricity annually.

Rational use of energy resources remains one of the priority areas of "KazTransOil" JSC's activities and an important component of its sustainable development strategy. The Company consistently implements a set of measures aimed at modernizing production facilities, increasing energy efficiency, and reducing environmental impact.

"KazTransOil" JSC is the national operator of the main oil pipeline, part of the group of companies of "KazMunayGas" NC" JSC. It possesses a diversified network of main oil pipelines with a length of 5.2 thousand km and provides operator services for the maintenance of third-party pipelines with a total length of over 5 thousand km.
