Batumi Oil Terminal reduces energy consumption amid growth in cargo transshipment volumes

In the first 10 months of 2026, Batumi Oil Terminal LLC (BOT), a foreign asset of KazTransOil JSC located in Batumi, reduced its electricity consumption by 1,979 thousand kWh, or 21.35%, compared to the same period last year.

At the same time, specific energy consumption per tonne of all types of petroleum products decreased by 0.79 kWh/tonne, or 25.93%.

During the reporting period, BOT's natural gas consumption decreased by 4,558 thousand m³, representing a 44.88% reduction compared to the same period last year.

Specific gas consumption per tonne of dark petroleum products decreased by 2.1 m³/tonne, or 31.97%, compared to the corresponding period of 2025.

The economic benefit generated by BOT's implementation of energy-saving measures in January–October of this year amounted to $1,836 thousand.

It is particularly noteworthy that the reduction in energy resource consumption was achieved amid increased production activity at BOT. Thus, in January–October 2026, the volume of oil cargo transshipment through the terminal amounted to 1 million 572 thousand tonnes, an increase of 38.5 thousand tonnes, or 2.5%, compared to the same period in 2025.

BOT is pursuing systematic efforts to improve energy efficiency and optimize the use of energy resources. These measures contribute to lower production costs, improved operational efficiency and the sustainable operation of the enterprise.

KazTransOil JSC is the national operator of the main oil pipeline system and is part of the KazMunayGas National Company JSC group of companies. It operates a diversified network of main oil pipelines spanning 5.2 thousand km and provides pipeline operation and maintenance services to third-party organizations for pipelines with a total length of more than 5 thousand km.

Batumi Oil Terminal LLC is a wholly owned subsidiary of KazTransOil JSC (100%). BOT directly owns and manages the company's operating assets in Georgia.
