The Company uses the following calculation method to determine the carrying amount of shares:

Carrying amount per common share is a quotient of the net assets for common shares by the number of common shares.

$$2,804 = 9,679,750 / 3,452,730$$

Net assets for common shares are calculated using the following formula:

$$\text{NAV} = (\text{TA} - \text{IA}) - \text{TL} - \text{PS}, \text{ where}$$

- TA – issuer's assets recognised in the issuer's statement of financial position as at the calculation date;
- IA – intangible assets in the issuer's statement of financial position as at the calculation date;
- TL – liabilities in the issuer's statement of financial position as at the calculation date;
- PS – balance of Authorised Capital, Preferred Shares item in the issuer's statement of financial position as at the calculation date.

$$9,679,750 = (31,564,493 - 88,623) - 21,796,120$$

Carrying amount per preferred share is calculated using the following formula:

$$\text{BVPS2} = \text{LPS} / \text{NOPS2}, \text{ where}$$

- BVPS2 – (book value per preferred share of the second group) carrying amount per preferred share of the second group as at the calculation date;
- NOPS2 – number of outstanding preferred shares of the second group as at the calculation date;
- LPS – balance of preferred shares recorded as liabilities in the issuer's statement of financial position as at the calculation date.

$$1,200 = 900,000 / 750$$
